How to use INDERMIL® flexifuze™ in 3 easy steps.

Step 1
Hold the applicator in one hand with the tip pointed upward and away from user and the patient to avoid inadvertent contact.

Step 2
Approximate the wound edges together. Press the device between forefinger and thumb on the dots to break the inner glass ampoule.

Step 3
**Gently** squeeze the tube between thumb and forefinger until the adhesive appears at the brush tip. Apply the adhesive in a thin film over the length of the wound. Hold the wound closed for 60 seconds to complete the bond.

One device provides wound coverage of over 20cm.
